The Science behind LOVEBRAND Detox Drops

Toxins, encompassing heavy metals like lead, mercury, cadmium, and arsenic, as well as chemicals, pesticides, and herbicides, pose substantial health risks to both humans and our cherished canine companions. Studies reveal that animals bear higher levels of toxicity than humans. Due to their compressed life spans, proximity to the ground, and smaller size, animals may manifest health issues from exposure more rapidly than humans. Commercial pet food, vaccinations, tap water, drugs, antibiotics, plastics, litters, and such are all possible sources of harmful toxins for our animals. Apart from offering a toxin-free and high-quality diet, pet owner must also care about cleansing the pet's body with detox supplements.

Zeolites, structured minerals formed during volcanic eruptions and lava interactions with salt and fresh water, provide a unique solution. Their cage-like structure naturally attracts positively charged particles, including heavy metals and harmful chemicals, effectively trapping and safely excreting them from the body.

Zeolites, hailing from a history of over 800 years of use in Asia for health promotion, are a proven and natural detoxification agent. LOVEBRAND Detox Drops source their zeolite from Australia, renowned for its world-class quality. This mineral, passing through the system like a magnet, attracts and collects positively charged ions, effectively detoxifying the body. Moreover, Zeolite plays a crucial role in maintaining internal pH levels, supporting kidney function, and alleviating pressure on these vital organs. Beyond detoxification, Zeolite enhances gut health by fortifying the gut lining, preventing leaks, and reducing inflammation, contributing to overall well-being. Furthermore, by attracting heavy metals away from the body, Zeolite strengthens the immune system and promotes the production of vital T-cells, bolstering the body's defence against pathogens.

Additionally, activated charcoal, with its exceptional adsorptive properties, effectively binds to and neutralizes a wide spectrum of toxins and chemicals in the gastrointestinal tract. Its microporous structure allows for the absorption of harmful substances, mitigating toxicity and providing a valuable intervention in cases of acute poisoning or overdose.

LOVEBRAND Dog and Cat Detox Drops solution also stimulates the immune system through traditionally used herbs like red clover, milk thistle and sarsaparilla, which contribute to balancing the body to a more alkaline state, creating an environment where diseases, cancers, parasites, and viruses struggle to thrive.

LOVEBRAND Detox Drops provide a convenient means for dogs and cats of any age to benefit from these remarkable properties
